

## **Crossroad Archery announces the launch of the fully adjustable Crossover Stabilizer**

Crossroad Archery is excited to announce the launch of the industry's first fully adjustable Stabilizer, The Crossover. This is the first ever adjustable bow stabilizer to crossover between all types of archery and archers.

The new Crossover Stabilizer is constructed with uni-directional Carbon Fiber tubes that give it more rigidity while ensuring it remains lightweight. The stabilizer also features internal stops that prevent each section from sliding or twisting out of position. The official launch date for the Crossover Stabilizer is January 8th, 2015.

The Crossover is available in 2 models; model numbers 1233 and 1017. The 1233 is 12 inches in length and can be extended up to 33 inches, providing 21 inches of adjustability. The 1017 is 10 inches in length and can be extended up to 17 inches, providing 7 inches of adjustability. Model 1233 comes with (3) 1 ounce brass weights and model 1017 comes with (1) 4 ounce brass weight. Additional brass weights are available in 1 ounce, 4 ounces and 8 ounces.

Hunters prefer short stabilizers, while competition or target archers prefer long stabilizers. With each of these archers finding themselves crossing over between both worlds, the Crossover provides both types of archers with a fully adjustable stabilizer solution. Instead of having one stabilizer for 3-D, another one for target and yet another for hunting, archers now have the ability to have one stabilizer that does it all.

Crossroad Archery is a family owned company headquartered in Albuquerque, New Mexico and specializes in the design of archery accessories. Crossroad Archery is committed to offering stabilizers that improve the aim and stability of the bow. A set of Crossover Stabilizers allows an archer to have more confidence in each shot, hold on target longer,

while providing a completely custom and fully adjustable stabilizer setup.

"We aren't just hunters; we are archers and we love every aspect of shooting our bow. We saw a need in the industry for a stabilizer that could be used by all types of archers for all types of archery, and thus the Crossover was born. Complete adjustability is an amazing feeling for a stabilizer. You don't really know what you can do until you bolt it on your bow. And that's exactly what we encourage you to do. Bolt on a Crossover and take A Turn For The Better." said the president of Crossroad Archery, Rod Roady
